

229Th19F+ · quadrupole-omitted baseline · $E_z = 100$ V/cm, $B_z = 100$ G

X $^3\Delta_1$ · one panel per (J, F_1) manifold · basis $J \leq 8$

zero-field parity
p = +1 p = -1

Each panel is referenced to its own (J, F_1) zero-field centroid, printed as its offset;
differences of those offsets give the spacing between any two manifolds.
Panels in a row share one energy window, set by the widest manifold in that row.
 g_F is the fitted dE/dM_F of that F band divided by $-\mu_B B_z$.
