

232Th19F+ · measured / adopted inputs · $E_z = 100$ V/cm, B_z zero-field parity
 $X^3\Delta_1$ · one panel per (J, F_1) manifold · basis $J \leq 8$

Each panel is referenced to its own (J, F_1) zero-field centroid, printed as its offset;
differences of those offsets give the spacing between any two manifolds.
Panels in a row share one energy window, set by the widest manifold in that row.
