

229Th19F+ · quadrupole-omitted baseline · $E_z = 100$ V/cm, $B_z = 100$ G
 $X^3\Delta_1$ · levels correlated with $J = 1-3$ · basis $J \leq 8$

Energies referenced to the per-J zero-field centroid, the same constant in all four configurations. Bars sit at true M_F ; F levels separate vertically, not sideways.
 At 100 V/cm the molecule is essentially polarized: above the Omega doublet J is a correlation label, not a quantum number, and parity is the zero-field label carried along the field ramp.
 Molecular constants transferred unscaled from 232ThF+; unknown Th spin rotation omitted; no physical uncertainty band.
